Name: ______________

Professor Hans Rosling says there’s nothing boring about stats, and then goes on to prove it in this documentary produced by Wingspan Productions and broadcast by BBC, 2010. Watch the documentary and answer the following:

1. The average person spends ________ years asleep.

2. Though men consider themselves to be better drivers than women, they have _____ times as many fatal accidents as women do.

2. ____________________ shares more data than any other American city.

3. On average, Swedish people have less than 2 _________________.

4. The ____________________ in data is just important as the average.

5. The shape a set of data makes is called its _________________.

6. Give an example of the Poisson distribution:

7. In 1810, the life expectancy of people in nearly all countries in the world was under ____ years.

8. The way that things vary together is called _____________________.

9. _____ terabytes of photos are added to Facebook everyday.

10. Each person is exposed to approximately _____ million words of conversation in his/her lifetime.

11. Younger people associate happiness with ____________________; older people associate happiness with _____________________.

REFLECTION
Did you enjoy the documentary, you can be honest here 😊?

What did you find the most interesting or surprising?
